

COMPANY PRESENTATION

50 years of consulting services, engineering, construction, and monitoring

50 YEARS OF ENVIRONMENTAL SOLUTIONS

From the inception of Hidroinženiring d.o.o. in 1971 until today, we are proud to be part of numerous environmental and infrastructural projects located all over the world.

Our work combines sustainability, the latest technological breakthroughs, and a half-century's worth of experiences in the fields of general hydrotechnics, municipal and industrial wastewater treatment, and refuse solutions.

Our approach to project management is holistic. We offer consulting services and expertise throughout all project phases. We take care of planning and designing the project, engineering and its implementation, all the way to systems' monitoring. From idea to implementation and beyond, we got it covered.

At Hidroinženiring d.o.o., we consider prudent and technologically advanced management of waste materials as an opportunity for their reuse. This is our way of honouring the natural environment and communities that we are intrinsically part of.

ABOUT US

We are a Slovenian company with 50 years of experience in development in the fields of:

- elementary hydrotechnical solutions,
- communal and industrial wastewater treatment,
- final treatment of wastewater and special types of hazardous waste,
- environmental remediation,
- complex environmental issues,
- environmental and technical consulting.

Environmental consultancy with comprehensive impact assessment, which is taken into account when deciding on the place-

VALUES

The culture and character of individuals at Hidroinženiring d.o.o. define the culture and character of our company. Our values are based on the principles of ethics, social responsibility, creativity, excellent client relationships, and commitment to sustainable development.

PEOPLE

Our staff is distinguished by high qualification, complex knowledge, and rich experience. Our employees are a competent and credible source of knowledge, and their products, which are the result of cooperation between the various sectors – from project planners to technologists and engineers – offer a complete development solution.

SOCIAL RESPONSIBILITY

Our transparent business model, ethical behavior, technical advice based on economically and environmentally acceptable technologies, care for the environment and respect for human rights meet the expectations and justify the trust of our customers – the state, the state sectors, local communities, industry, manufacturing, and service sectors – who value our business model which has been giving results for 50 years.

ment of objects or devices in the area, operational monitoring of waste water, technical advice on environmental remediation, and obtaining the ISO 14001 environmental certificate – these are our specialty.

We are present in Slovenia, Croatia, Bosnia and Herzegovina, Serbia, Macedonia, Albania, Kosovo, and Bulgaria. We are renowned for quality technological solutions, our innovation, and their competitiveness.

SERVICES AND SKILLS

- technical consulting
- project designing
- project management
- feasibility studies
- engineering and construction
- start up and operational monitoring
- training of operational staff
- maintenance assistance

Basic hydrotechnics

- regulation of watercourses
- land reclamation
- hydrotechnical objects
- artificial snow solutions

Collection and wastewater treatment

- storm and wastewater collection systems
- municipal wastewater treatment plants
- industrial wastewater treatment plants
- sludge disposal concepts, incinerations plants
- laboratory services and testing
- process optimization and water treatment
- process automation (SCADA)
- energy efficiency and energy audits

Water supply

- water supply network
- water supply facilities
 - storage tanks

- pumps
- water purification facilities

Solid waste management

- waste management strategies and feasibility studies
- municipal and hazardous waste consulting
- treatment facilities and waste-to-energy applications

Environmental consulting

- comprehensive evaluation of environmental impacts
- environmental management and economics
- contaminated sites
- remediation and disposal management
- landfill design

Regional development

- community advising
- watershed advising
- preparation of documentation for obtaining grants (EU Funds, World bank, EBRD ...)

FOR A CLEAN FUTURE

For five decades now, renewable energy sources, circular economy, and sustainable development continue to be the foundational principles of our engineering.

We are a company based on expertise and experience. We intend to further employ these towards innovative and carefully-planned technological solutions for smart management of waste and energy, as well as regeneration of wastewater and materials.

We are aware that our technological solutions do not live in isolation. Instead, they are part of the life of cities, villages – and people. Together with our clients, we aim to contribute towards an infrastructure where nature and all our stakeholders meet and prosper.
